The Secret Life of Bad Bishops

By

Esben Lund

Quality Chess
www.qualitychess.co.uk
In this Foreword I will introduce the author, and allow Esben to explain what his book is about in the Preface. I have known Esben for about twenty years. Back in 2001 we wrote a book together, *Meeting 1.d4*, for Everyman Chess. Unlike a lot of other authors, we actually sat in the same room as we wrote, sharing ideas and opinions. The book was no runaway success, but it was decent and we learned a lot from the process.

When I co-founded Quality Chess in 2004, Esben told me he had an idea for a book. I did not think twice before offering him a contract, even if the subject, *Rook vs. Two Minor Pieces*, was a bit technical and unlikely to sell lots of copies. This was exactly how I wanted our new publishing house to be: willing to publish a less commercial book if we felt the content was interesting.

We expected the book to find a limited audience, but many friends have told us that they loved it, finding it thought-provoking. One admirer of the book is the Women’s World Champion, Hou Yifan, who revealed that she read it as part of her preparation for the 2013 World Championship match against Anna Ushenina, which she won 5½–1½. Ushenina came well prepared, with top grandmasters to provide her with great openings. But Hou Yifan’s focus on the middlegame and endgame proved a sounder strategy.

I think many people mistook *Rook vs. Two Minor Pieces* for an endgame book, when actually it had more material on the opening than the endgame, and overall it was mainly a middlegame book, should you have a deep desire to pin it down. This book might suffer from the same misunderstanding, but at least we have tried to make the title a bit more interesting this time!

Ten years have passed and Esben has not only improved as a player, he has also matured (this lovely word that makes growing older into a positive thing) as a writer, as this book shows.

Quality Chess is happy to continue our mission of publishing interesting and challenging books, no matter how uncommercial their focus. You might suspect that I am trying to put you off reading this book, but we both know that if you have read this far, you are likely to keep on reading; and you will be rewarded for that decision.

Preface 7

1. Introducing the Double-edged Bishop – Definitions and Limitations 9
   1.1 Three opening lines with DEBs 9
      1.1.1 The Rubinstein Nimzo-Indian 10
      1.1.2 The Berlin Wall 11
      1.1.3 The Advance French 12
   1.2 Other important factors 13
   1.3 Limitations to positions with DEBs 14
      1.3.1 Positions with DEB relevance 15
   1.4 More about the DEB: Alekhine –Yates 17
   1.5 More complex examples 24
      1.5.1 Bishop vs. knight 27
      1.5.2 Two examples from John Watson 29
      1.5.3 A modern grandmaster game: Radjabov – Eljanov 31
   1.6 Chapter recap 39

2. The Exchange Sacrifice 41
   2.1 Case 1: Rook takes DEB – the breakthrough 42
   2.2 Case 2: Exchange sacrifice to strengthen the DEB 44
   2.3 Case 3: Exchange sacrifice to weaken the DEB 46
   2.4 Chapter recap 59

3. From Opening to Early Middlegame – The Advance French 61
   3.1 Guiding questions 61
   3.2 Theoretical overview 62
   3.3 Chernin’s 9...b4!? 67
      3.3.1 The solid 11...xc3 68
      3.3.2 The double-edged 11.bxc3!? 70
   3.4 White allows ...g5 71
   3.5 Other positions 72
   3.6 Answers to questions 78
   3.7 Variation Index 86
   3.8 Chapter recap 88
4. Endgame Section

4.1 Rook vs. bishop
   4.1.1 Fortress positions
   4.1.2 Fortress-like Position (FLP)
   4.1.3 Fire on Board
   4.1.4 Complex endgame examples

4.2 Bishop vs. knight
   4.2.1 Zugzwang
   4.2.2 The other factors:
      4.2.2.1 The rook’s pawn
      4.2.2.2 The knight dominates
      4.2.2.3 King and pawn space
   4.2.3 Good technique
      4.2.3.1 Pawns and bishop on the same colour
      4.2.3.2 Bishop check that forces the king to choose a side
      4.2.3.3 Counterplay is allowed
   4.2.4 Worst-case scenarios
      4.2.4.1 Creative Chess Strategy
   4.2.5 The bishop pair vs. bishop and knight
   4.2.6 Chapter recap
      4.2.6.1 Rook vs. bishop
      4.2.6.2 Bishop vs. knight

5. Exercises

   Introduction

   Name Index
You hold in your hands a book that has been long in coming to fruition. It took me years to collect material for the early chapters as well as for the exercise section, and it demanded further time testing it on several chess players of different strengths. When I finally concluded some chapters, I realized from the feedback I received that some of them needed restructuring. In the end I excluded several exercises and also one chapter.

My ambition with the book is to introduce the subject of good and bad bishops in a proper way, and that’s why the introductory chapter has become slightly longer than usual compared to other chess books. I find existing views of good and bad bishops slightly simplified and misleading. Because the way I am dealing with them is quite a delicate subject, I simply decided not to let the size of the introduction be the main issue, but rather to focus on communicating my view in a proper and understandable way.

Both IM Andreas Hagen and FM Sebastian Nilsson told me that, while reading through the introduction, they thought at the beginning: “Now the bishop MUST be bad”, while I kept calling it a double-edged bishop (DEB). And the more they read of the introduction, the more they became accustomed to my way of thinking. Danish IM Nikolaj Mikkelsen made a nice comment that in many ways grasps and confirms my idea with this project: he said that he is now less afraid that his potentially bad bishop will in fact become bad.

The structure of the book is similar to that of *Rook vs. Two Minor Pieces* – my first book for Quality Chess: I am dealing with a general subject – this time good and bad bishops – and each of the chapters represents a phase in the game.

The introductory Chapter 1 is followed by Chapter 2 on exchange sacrifices. This is a quite natural follow-up, since this sacrifice can be a way to exchange the right pieces and isolate the potentially bad bishop further. As we shall see throughout the book, the presence of additional pieces on the board is crucial in determining whether the double-edged bishop will in fact end up as a bad bishop.

Chapter 3 deals with the transformation from opening to early middlegame. For that purpose I have chosen to look deeper into a certain variation of the Advance French (1.e4 e6 2.d4 d5 3.e5), as this opening line leaves both White and Black with double-edged bishops. I realize that not everyone plays this line, but this should not be the main point: the material is specifically chosen beyond just the opening theory such that an understanding of the early middlegame is achieved. And by following the good advice from Andreas Hagen to pose questions to the reader throughout the chapter (Dvoretsky likes to do this as well), this chapter can be seen as a test as to whether the reader has captured the essence of the first part of the book. Please answer each question, and check the solution before you move on, as sometimes the next question follows on from the previous question’s solution.
Chapter 4 is devoted to the endgame. Here I have analysed in depth the pure endgames rook vs. bishop and bishop vs. knight. It makes a lot of sense to consider what happens if the additional pieces go off the board and thereby ask the question: “What is the bishop able to do on its own?”

This led to some surprising and very useful conclusions. Rook vs. bishop endgames are the sharpest I have ever come across. By entering a pure rook vs. bishop ending, the side with the bishop cannot allow the position to come to a standstill, where only the rook side can improve his position (on the colour inaccessible to the bishop). If he allows the position to come to a standstill, he should be absolutely positive that it is a fortress. I present and discuss the possible fortresses for comparison. If the fortress-like position (FLP) is not a fortress, then the position is simply lost for the bishop side.

It was also beneficial to see in just how many positions it is better to place the pawns on the same colour as the bishop – contrary to the simplified rule of thumb that you should place the pawns on the opposite colour of the bishop. On the same colour the pawns can better be protected by the bishop and this comes in useful if, for instance, your activity is taking place on the kingside, whereas you only wish to defend the queenside from a distance.

The concluding Chapters 5 and 6 are devoted to exercises and their solutions, where the reader is able to test if he or she has grasped the essence of all aspects of the double-edged bishop. The exercises are given a level and a recommended time for solving, and the solutions are discussed thoroughly.

Thus the middlegame is given special attention in both the introductory Chapters 2 & 3 as well as in the exercise section.

The material presented in this book is on a high level, and I believe that players rated 1900 and above will benefit the most from it. Players eager to improve their play and understanding of the game will of course get a lot from the book as well. As an author and trainer it was important for me to test the material on players who are aspiring for titles (2 IMs and an FM). I can say with confidence that IMs will benefit a lot from the book on their way to the GM title, and I also believe that grandmasters can learn a thing or two.

I would like to thank all the people involved in this project, especially Andreas Hagen, Nikolaj Mikkelsen and Sebastian Nilsson for giving useful and critical feedback on the whole book from an early stage. This really shaped the book into what it has become. And a special thank-you goes to Jacob Aagaard for making this book possible. For me it was crucial to get an additional good and relevant critique from a grandmaster.

In any case, I hope you will find the book beneficial.

A note on my name: In 2009 I took a second first name (Silas) that I use in my everyday life, but for reasons of continuity I decided to keep Esben Lund on the front cover.

Chapter 2 – The Exchange Sacrifice

The next game is a favourite of mine as it contains an amazingly deep concept in the early middlegame.

Suat Atalik – Pavel Eljanov
Wijk aan Zee 2007

1.d4 ½f6 2.c4 e6 3.½c3 ½b4 4.e3 0–0 5.½d3 d5 6.a3 ½e7 7.½f3 ½bd7 8.0–0 c5 9.cxd5 exd5 10.½c2 b6 11.dxc5 ½a6 12.½e1 ½xc5 13.½d4 ½c8 14.½f5

This is our starting point of the game. Both players have a DEB in this position, on c1 and a6, and both have the same ‘defect’ of not attacking any concrete targets in the opponent’s position.

14...½fe4!? 15.½xc8 ½xc3 16.½xc3

Now it is Black to move, and his initiative has a chance to develop; this is the trade-off White decided on in contrast to a healthy pawn structure. At the same time White has a material plus and potential for the future, should Black’s initiative evaporate.

17...½h4

This might be the most critical point of the game, putting Black’s sacrifice to the test. I believe that this move was a part of Black’s whole concept when he sacrificed the exchange: He will force White to play g2-g3 which creates weaknesses on the light squares – the opposite colour of the DEB on c1. Now Black threatens to take immediately on f2 because of a nasty knight fork on e4.

18.g3

Was White forced to play this weakening pawn move?

18.½c2?!

This might be an improvement upon White’s play. Let’s analyse:

18...½e4

Not 18...½d3 19.½e2 since 19...½xc1? does not win back the exchange due to 20.½xc1 eyeing e8.
20.\textit{\textbf{d2?!}}

The crucial difference. It looks dangerous to allow sacrificial ideas, but they do not seem to work in Black’s favour. Without this little bishop move it would be very difficult for White to develop his queenside, and it might be the fear of some sacrifice that made Atalik reject this set-up.

20.\textit{f3?!} does not work because of 20...\textit{\textbf{xg3!}}.

20...\textit{\textbf{c8}}

20...\textit{\textbf{xf2?!}} 21.\textit{\textbf{gxh4}} \textit{\textbf{he4}} has the double threat of ...\textit{\textbf{xe4}} and ...\textit{\textbf{g4}}\textit{\textbf{†}}, but White defends successfully with 23.\textit{\textbf{e4}}! when 23...\textit{\textbf{xd2}} 24.\textit{\textbf{ed1}} wins back the material. It is easy to overlook details in this line.

21.\textit{\textbf{e3}} \textit{\textbf{f6}} 22.\textit{\textbf{f3}} \textit{\textbf{xc3}}

22...\textit{\textbf{g5}} 23.\textit{\textbf{g2}}! If White can get this defensive move in, then c2 was definitely the right place for the queen. 23...\textit{\textbf{h5}} 24.\textit{\textbf{h1}}! \textit{\textbf{xd2}} 25.\textit{\textbf{g4}}! \textit{\textbf{h4}} 26.\textit{\textbf{exd4}} and White has an advantage.

23.\textit{\textbf{bxc3}} \textit{\textbf{h5}}

White holds a small advantage here, although Black is in the game.

\textbf{18...\textit{\textbf{h3}} 19.\textit{\textbf{d1}}}

White is under pressure, but perhaps defending with too much caution. Other options were:

19.gxh4 loses to: 19...\textit{\textbf{e4}} 20.\textit{\textbf{c2}} \textit{\textbf{g4}}\textit{\textbf{†}}

21.\textit{\textbf{h1}} \textit{\textbf{d3++}}

Also possible was the natural-looking:

19.b4 \textit{\textbf{e4}}

19...\textit{\textbf{d3}}? 20.b5 \textit{\textbf{xe1}} 21.\textit{\textbf{xe1}} ++ with two bishops hanging.

20.\textit{\textbf{c7}} \textit{\textbf{f6}}

Now threatening to take on f2.

20...\textit{\textbf{xf2}} 21.\textit{\textbf{gxh4}}!

21.\textit{\textbf{a2}} \textit{\textbf{e8}}

21...\textit{\textbf{c4}}?! was also an option.

22.\textit{\textbf{f4}}

The position is extremely dangerous for White after 22.\textit{\textbf{xa7}}?! \textit{\textbf{d3}}, when it is difficult for him to untangle himself. For instance: 23.f3 \textit{\textbf{g3}}! Meanwhile, Black can strengthen his attack by advancing the h-pawn or playing ...\textit{\textbf{g5}} at the right moment.

The following lines show that the game is balanced:

22...\textit{\textbf{h5}}

22...\textit{\textbf{g5}}?!

23.\textit{\textbf{f5}} \textit{\textbf{xf5}} 24.\textit{\textbf{xf5}} \textit{\textbf{g6}}

Even with queens off the board, White still needs to be careful. All Black’s four pieces are active and cooperating well at the moment, which is not the case for White.

25.\textit{\textbf{d4}} \textit{\textbf{c3}} 26.\textit{\textbf{c2}} \textit{\textbf{xd4}}! 27.\textit{\textbf{exd4}} \textit{\textbf{d3}}

Black wins back the material.

28.\textit{\textbf{d2}} \textit{\textbf{e2}}\textit{\textbf{†}} 29.\textit{\textbf{dxe2}} \textit{\textbf{xe2}}=
19.\textit{\textcolor{red}{\textit{\textbf{e2}}} was also possible, but Black can choose to play 19...\textit{\textcolor{red}{\textit{\textbf{f6}}}} (19...\textit{\textcolor{red}{\textit{\textbf{e4}}} is met by 20.\textit{\textcolor{red}{\textit{\textbf{d2}}}!}), when he keeps the option open for both knight jumps to d3 or e4, depending on the circumstances. 20.\textit{\textcolor{red}{\textit{\textbf{d2}}} \textit{\textcolor{red}{\textit{\textbf{d3}}} Now after 21.\textit{\textcolor{red}{\textit{\textbf{f1}}} \textit{\textcolor{red}{\textit{\textbf{e5}}} Black wins back the material, and after 21.\textit{\textcolor{red}{\textit{\textbf{ed1}}? the sacrifice works: 21...\textit{\textcolor{red}{\textit{\textbf{xf2}}}! 22.\textit{\textcolor{red}{\textit{\textbf{xf2}}} \textit{\textcolor{red}{\textit{\textbf{xf2}}} 23.\textit{\textcolor{red}{\textit{\textbf{xf3}}} \textit{\textcolor{red}{\textit{\textbf{xd4}}} 24.exd4 \textit{\textcolor{red}{\textit{\textbf{e2}}}† with a mating attack.}}}}}}}}}}}}}}}

19...\textit{\textcolor{red}{\textit{\textbf{f6}}}!}

Very logical, for many reasons. We know that with every exchange White's DEB on c1 is being isolated. But with the exchange \textit{\textcolor{red}{\textit{\textbf{f6}}x\textit{\textcolor{red}{\textit{\textbf{d4}}}, opposite-coloured bishops will remain on the board and Black will rule on the light squares. For the record, the knight on d4 is defending the light squares (f3 and e2), so it's logical to exchange it to keep the attack going.}

20.\textit{\textcolor{red}{\textit{\textbf{e1}}}}

Another cautious defensive move, this time probably the best.

20.b4 fails to 20...\textit{\textcolor{red}{\textit{\textbf{e4}}} 21.\textit{\textcolor{red}{\textit{\textbf{e1}}} \textit{\textcolor{red}{\textit{\textbf{g5}}} with problems.}}}

20.\textit{\textcolor{red}{\textit{\textbf{c2}}} \textit{\textcolor{red}{\textit{\textbf{e8}}} 21.\textit{\textcolor{red}{\textit{\textbf{f5}}}?! Black's coordination is so good that again a queen exchange will not stop his initiative. (21.f3? \textit{\textcolor{red}{\textit{\textbf{xd4}}}! loses outright since the rook is pinned to the defence of f1. 22.exd4 \textit{\textcolor{red}{\textit{\textbf{e2}}}†) 21...\textit{\textcolor{red}{\textit{\textbf{xf5}}} 22.\textit{\textcolor{red}{\textit{\textbf{xf5}}} \textit{\textcolor{red}{\textit{\textbf{b3}}} 23.\textit{\textcolor{red}{\textit{\textbf{b1}}} \textit{\textcolor{red}{\textit{\textbf{c8}}} With ...\textit{\textcolor{red}{\textit{\textbf{c2}}} on its way. 24.\textit{\textcolor{red}{\textit{\textbf{d2}}} \textit{\textcolor{red}{\textit{\textbf{d3}}}!}}}}}}}}}}}

20...\textit{\textcolor{red}{\textit{\textbf{e8}}}}}

With White I would probably think along the lines: “What have I done to end up in this position – I made a simple bishop move with 14.\textit{\textcolor{red}{\textit{\textbf{f5}}} a long time ago, attacking the black rook on c8?!”

It is amazing how fast Black's initiative developed after the exchange sacrifice. It is also easy to forget that Black's a6-bishop is a DEB, since as long as Black's initiative is ongoing, the bishop seems only useful and very strong. But again, no direct targets are to be found in White's position that it can attack; all White's pawns are on dark squares. In short, the DEB on a6 is dependent on the remaining forces.

21.b4

The DEB on c1 is sensing a breath of air.

21...\textit{\textcolor{red}{\textit{\textbf{e4}}} 22.\textit{\textcolor{red}{\textit{\textbf{f3}}} 22.\textit{\textcolor{red}{\textit{\textbf{b2}}} is still too early: 22...\textit{\textcolor{red}{\textit{\textbf{g5}}}†}}}

My engine mentions 22.b5 as White's best defence, with the point 22...\textit{\textcolor{red}{\textit{\textbf{xb5}}} 23.\textit{\textcolor{red}{\textit{\textbf{xb5}}} \textit{\textcolor{red}{\textit{\textbf{xa1}}} 24.\textit{\textcolor{red}{\textit{\textbf{xd5}}, but Black can play the non-}}}}}}}}}}
materialistic: 22...\textit{\textbf{\textbackslash g}d4!} 23.\textit{\textbf{\textbackslash e}d4} (Even worse is 23.exd4 \textit{\textbf{\textbackslash x}b5} 24.\textit{\textbf{\textbackslash c}e3} f5! with a huge attack.) 23...\textit{\textbf{\textbackslash x}b5} This simply keeps the right pieces on the board, and White remains with the same problems, now with a pawn less. 24.f3 \textit{\textbf{\textbackslash g}5} is similar to the game continuation.

22...\textit{\textbf{\textbackslash g}5} 23.\textit{\textbf{\textbackslash f}2} \textit{\textbf{\textbackslash h}5} 24.\textit{\textbf{\textbackslash g}2}

\begin{figure}[h]
\centering
\includegraphics[width=0.5\textwidth]{chess_board_1}
\caption{Position after 24.\textit{\textbf{\textbackslash g}2}}
\end{figure}

24...\textit{\textbf{\textbackslash c}8!}
Black comes up with new attacking ideas.

25.\textit{\textbf{\textbackslash b}2}
25.g4? \textit{\textbf{\textbackslash x}g4} 26.fxg4 \textit{\textbf{\textbackslash x}g4}\textsuperscript{\textdagger} and the rook on d1 is hanging.

25...\textit{\textbf{\textbackslash x}d4}

\begin{figure}[h]
\centering
\includegraphics[width=0.5\textwidth]{chess_board_2}
\caption{Position after 25...\textit{\textbf{\textbackslash x}d4}}
\end{figure}

26.\textit{\textbf{\textbackslash x}d4}
The rook is added to the defence via the 4th rank.

26.\textit{\textbf{\textbackslash x}d4} \textit{\textbf{\textbackslash h}3}\textsuperscript{\textdagger} 27.\textit{\textbf{\textbackslash h}1} \textit{\textbf{\textbackslash f}3} with the deadly threat of ...\textit{\textbf{\textbackslash f}5-e4}.

26...\textit{\textbf{\textbackslash h}3}\textsuperscript{\textdagger} 27.\textit{\textbf{\textbackslash h}1} \textit{\textbf{\textbackslash f}3} 28.\textit{\textbf{\textbackslash f}4} \textit{\textbf{\textbackslash g}5}
For the first time in many moves, White has breathing space and has also caught up with his lack in development. Notice that even after the entrance on the long diagonal a1-h8, the white bishop is still a DEB.

29.\textit{\textbf{\textbackslash d}2}
Black answers 29.\textit{\textbf{\textbackslash h}4} with 29...\textit{\textbf{\textbackslash g}6}.

\begin{figure}[h]
\centering
\includegraphics[width=0.5\textwidth]{chess_board_3}
\caption{Position after 29...\textit{\textbf{\textbackslash g}6}}
\end{figure}

29...\textit{\textbf{\textbackslash e}6}
My computer prefers the straightforward 29...\textit{\textbf{\textbackslash e}4!} 30.\textit{\textbf{\textbackslash f}4} f6 (threatening 31...\textit{\textbf{\textbackslash e}2}) 31.\textit{\textbf{\textbackslash g}1} \textit{\textbf{\textbackslash g}4} 32.\textit{\textbf{\textbackslash g}2} \textit{\textbf{\textbackslash h}3}\textsuperscript{\textdagger} 33.\textit{\textbf{\textbackslash h}1} \textit{\textbf{\textbackslash e}5} with ...\textit{\textbf{\textbackslash h}5} coming next.

30.\textit{\textbf{\textbackslash f}2} d4?!
Eljanov gives up another pawn to feed his initiative. My engine suggests the calm 30...f6 31.\textit{\textbf{\textbackslash d}1} \textit{\textbf{\textbackslash d}8} with a stable advantage.

31.\textit{\textbf{\textbackslash e}4?!}
Now the black initiative continues with the same force as before.
31. \( \textsf{xd4} \) \( \textsf{d5}^\dagger \) 32. \( \textsf{g1} \) \( \textsf{g5} \) gives Black the same kind of initiative as in the game.

31. \( \textsf{e1}! \) was worth a try, or White could consider 31.e4!? to at least repair some of the light squares.

31... \( \textsf{d5}^\dagger \) 32. \( \textsf{g1} \) \( \textsf{g5} \) 33. \( \textsf{e1} \) \( \textsf{e6} \) 34. \( \textsf{h4} \) \( \textsf{h3}^\dagger \) 35. \( \textsf{e1} \) \( \textsf{e6} \) 36. \( \textsf{h4} \)

In this position both players still possess their DEB, but there is a huge difference in the strength of them, because of White's vulnerable king position. White's b2-bishop looks utterly helpless here.

37. \( \textsf{e1} \) \( \textsf{d8} \) 38. \( \textsf{c7} \) a6 39. \( \textsf{g2} \)

39.a7? leaves the rook out of play after 39... \( \textsf{e4} \rightarrow \).

The next phase of the game we can name “The dance of the black queen”. As long as Black does not exchange heavy pieces, his advantages will continue to exist.

39... \( \textsf{b3} \) 40. \( \textsf{c3} \) \( \textsf{d1} \) 41. \( \textsf{e3} \) h6

41... \( \textsf{d5}?? \) 42. \( \textsf{xd5}++-

42. \( \textsf{e2} \) \( \textsf{b1} \) 43. \( \textsf{c3} \) \( \textsf{f5} \)

43... \( \textsf{d5} \) looks strong, but White can play 44. \( \textsf{e1}! \) preparing the exchange of rooks.

(Not 44. \( \textsf{e8}^\dagger \) \( \textsf{xe8} \) 45. \( \textsf{xe8}^\dagger \) \( \textsf{h7} \) 46. \( \textsf{c1} \) \( \textsf{d3} \) when White’s coordination is far worse.)

44... \( \textsf{c1} \) 45. \( \textsf{e5} \) \( \textsf{b1}^\dagger \) 46. \( \textsf{f2} \) \( \textsf{c1} \)

46... \( \textsf{d5} \) 47. \( \textsf{e8}^\dagger \) \( \textsf{xe8} \) 48. \( \textsf{xe8}^\dagger \) \( \textsf{h7} \)

49. \( \textsf{e3} \) \( \textsf{h1} \) 50. \( \textsf{f4} \) is of course unpleasant for White, but nothing is clear. On the plus side Black’s attacking material has been reduced.

47. \( \textsf{b2} \)

Here White had a chance to transform the position to what I believe gives him better chances of survival: 47.d5!? \( \textsf{xd5} \) (47... \( \textsf{xc3} \) 48. \( \textsf{dxe6} \) \( \textsf{d2} \) 49. \( \textsf{c7} \) \( \textsf{xe5} \) 50. \( \textsf{xd2} \) \( \textsf{xe7} \) and a difficult technical task lies ahead for Black to convert the advantage in this ending.) 48. \( \textsf{e8}^\dagger \) \( \textsf{xe8} \) 49. \( \textsf{xe8}^\dagger \) \( \textsf{h7} \) 50. \( \textsf{c5} \) This double attack is the real point, forcing Black into a queen ending. 50... \( \textsf{c2}^\dagger \) 51. \( \textsf{e3} \) \( \textsf{f6} \) 52. \( \textsf{xd5} \) \( \textsf{xc3}^\dagger \) 53. \( \textsf{f2} \) and once again White can fight for the draw in a queen ending.

47... \( \textsf{c6} \) 48. \( \textsf{c5} \) \( \textsf{h1} \) 49. \( \textsf{f1} \) \( \textsf{e4} \) 50. \( \textsf{e2} \) \( \textsf{b1} \) 51. \( \textsf{c1} \) \( \textsf{a2} \) 52. \( \textsf{c3} \)

52. \( \textsf{c3} \) \( \textsf{d5} \)
52...\texttt{g4} 53.\texttt{d2} \texttt{d5} 54.\texttt{g1} \texttt{e6} 55.\texttt{e5} \texttt{f3} 56.\texttt{g2} \texttt{b3} 57.\texttt{h2} \texttt{d5} 58.\texttt{e2} \texttt{c4} 59.\texttt{f2} \texttt{f6} 
Black has found the win: the rook on c5 is disconnected from the queen and bishop, and ...\texttt{e8} cannot be prevented.

60.\texttt{h3} \texttt{e8} 61.\texttt{d5} \texttt{d1} 
Black’s initiative lasted more than forty moves! 0–1

We end this introduction with a great game that somehow never really unfolded, but I hope to show in my analysis what went on in the game ‘under the surface’. The reader should be familiar with all the concepts of the DEB by now.

\textbf{Vladimir Kramnik – Boris Gelfand}

Wijk aan Zee 2008

1.d4 \texttt{f6} 2.c4 \texttt{e6} 3.\texttt{f3} \texttt{b6} 4.g3 \texttt{a6} 5.b3 \texttt{b4}† 6.\texttt{d2} \texttt{c7} 7.\texttt{g2} \texttt{c6} 8.0–0 \texttt{d5} 9.\texttt{c2} \texttt{bd7} 10.\texttt{d1} 0–0 11.a4 \texttt{c5} 12.\texttt{a3} \texttt{b7} 13.\texttt{b2} \texttt{c8} 14.\texttt{ac1} \texttt{e4} 15.\texttt{e1} \texttt{f6} 16.b4

16...\texttt{a8}
Yusupov believes that Black has equalized at this point, whereas Marin thinks that White is able to obtain a small plus.

17.\texttt{e3}
Marin recommends 17.\texttt{b1}.

17...\texttt{xd4} 18.\texttt{exd4} \texttt{dxc4}

At this point in the game, it is not difficult to spot the possible DEBs in the position: Black’s a8-bishop and White’s e1-bishop. All four bishops – in fact all pieces – are still on the board, so none of the DEBs are unique, but further exchanges will soon reveal how the game is likely to develop. Deep strategic thinking is about foreseeing such developments.

19.\texttt{e5}
Marin awards this move – and Gelfand’s reply to it – an exclamation mark. White’s idea is to make use of the somewhat unstable knight on e4 and to force through d4-d5.

19...\texttt{g5}!
Forcing White to play f2-f4.

20.\texttt{f4} \texttt{c7} 21.\texttt{axc4} \texttt{f5}
21...\texttt{f6}?! 22.\texttt{d5}! (Marin)

22.\texttt{c3} \texttt{xc1} 23.\texttt{xc1} \texttt{df6}
The d5-square is under control.

24.\texttt{c6} \texttt{c7} 25.b5
